Type 2A Models

For Your Records and Warranty Assistance
For reference, also attach your receipt or a copy of your receipt to the manual.

Model Name

Model No.

Date Purchased

Where Purchased
Welcome

Your new Hunter® ceiling fan is an addition to your home or office that will provide comfort and performance for many years. This installation and operation manual gives you complete instructions for installing and operating your fan.

We are proud of our work. We appreciate the opportunity to supply you with the best ceiling fan available anywhere in the world.

Before installing your fan, for your records and warranty assistance, record information from the carton and Hunter nameplate label (located on the top of the fan motor housing).

Cautions and Warnings

- READ THIS ENTIRE MANUAL CAREFULLY BEFORE BEGINNING INSTALLATION. SAVE THESE INSTRUCTIONS.
- Use only Hunter replacement parts.
- To reduce the risk of personal injury, attach the fan directly to the support structure of the building according to these instructions, and use only the hardware supplied.
- To avoid possible electrical shock, before installing your fan, disconnect the power by turning off the circuit breakers to the outlet box and associated wall switch location. If you cannot lock the circuit breakers in the off position, securely fasten a prominent warning device, such as a tag, to the service panel.
- All wiring must be in accordance with national and local electrical codes and ANSI/NFPA 70. If you are unfamiliar with wiring, use a qualified electrician.
- To reduce the risk of personal injury, do not bend the blade attachment system when installing, balancing, or cleaning the fan. Never insert foreign objects between rotating fan blades.
- To reduce the risk of fire, electrical shock, or motor damage, do not use a solid-state speed control with this fan. Use only Hunter speed controls.
- This product conforms to UL STD 507 and is certified to STD C22.2 No.113
- Wash your hands after your fan installation is complete.
Preparing the Fan Site

Step 1 - Choose the Fan Site

Proper ceiling fan location and attachment to the building structure are essential for safety, reliable operation, maximum efficiency, and energy savings.

Choose a fan site where:

- No object can come in contact with the rotating fan blades during normal operation.
- The fan blades are at least 7 feet above the floor and the ceiling is at least 8 feet high.
- The fan blades have no obstructions to airflow, such as walls or posts, within 30 inches of the fan blade tips.
- The fan is directly below a joist or support brace that will hold the outlet box and the full weight of the fan.

Checklist for Existing Fan Site

If you want to use an existing fan site, complete the following checklist to determine if the site is acceptable and safe for your new Hunter fan. If you cannot check off every item, prepare a new fan site as described on this page.

Fan Support System
- Fan attaches directly to building structure.
- Fan support system will hold full weight of the fan and light kit.

Ceiling Hole
- The outlet box clearance hole is directly below the joist or support brace.

Outlet Box
- The outlet box is an UL-approved octagonal 4” x 1-1/2” outlet box (or as specified by the support brace manufacturer).
- The outlet box is secured to the joist or support brace by wood screws and washers through the inner holes of outlet box.
- The outer holes of the outlet box are aligned with joist or support brace.
- The bottom of the outlet box is recessed a minimum of 1/16” into ceiling.

Wiring
- The electrical cable is secured to outlet box by an approved connector.
- Six inches of lead wires extend from outlet box.

If your existing fan site is suitable, skip ahead to Section 2 • Installing the Ceiling Plate.
Preparing the Fan Site (continued)

Step 2 - Cut the Ceiling Hole

2-1. Locate the site for the ceiling hole directly below the joist or support brace that will hold the outlet box and fan.
2-2. Cut a 4" diameter hole through the drywall or plaster of the ceiling. You will use the hole to install the support brace and outlet box.

Step 3 - Install a Support Brace, If Necessary

Determine if there is a ceiling joist directly above the ceiling hole. If the joist is there, determine if it is positioned to allow you to recess the outlet box a minimum of 1/16” into the ceiling. If NOT, install a support brace as follows:

3-1. Attach a 2” x 4” support brace between two joists. Position it to allow you to recess the bottom of the outlet box a minimum of 1/16” into the ceiling.
3-2. Check the support brace to ensure it will support the full weight of the fan and light kit.

Step 4 - Install the Outlet Box

4-1. Obtain a UL-approved octagonal 4” x 1-1/2” outlet box, plus two #8 x 1-1/2” wood screws and washers, available from any hardware store or electrical supply house.
4-2. Orient the outlet box so that both the inner and outer holes in the box align with the joist or support brace.
4-3. Drill pilot holes no larger than the minor diameter of the wood screws (5/64”) through the inner holes of the outlet box.
4-4. Attach the outlet box directly to the support brace or joist with two #8 x 1-1/2” wood screws and washers. The bottom of the outlet box must be recessed a minimum of 1/16” into the ceiling.

Step 5 - Prepare the Wiring

5-1. Make sure the circuit breakers to the fan supply line leads and associated wall switch location are turned off. If you cannot lock the circuit breakers in the off position, securely fasten a prominent warning device, such as a tag, to the service panel.
5-2. Thread the fan supply line through the outlet box so that the fan supply line extends at least 6” beyond the box.
5-3. Attach the fan supply line to the outlet box with an approved connector, available at any hardware store or electrical supply house.
5-4. Make certain the wiring meets all national and local standards and ANSI/NFPA 70.

You have now successfully prepared your ceiling fan site. For instructions to install your ceiling fan, go to your fan manual and continue with Section 2 • Installing the Ceiling Plate.

⚠️ CAUTION: All wiring must be in accordance with national and local electrical codes and ANSI/NFPA 70. If you are unfamiliar with wiring, use a qualified electrician.
Mounting and Optional Accessories

Understanding Mounting

Hunter’s patented mounting system provides you maximum ease in installing your fan. This fan was designed to be mounted only on flat ceilings and can be used on ceilings less than 8 feet high.

Considering Optional Accessories

Consider using Hunter’s optional accessories, including a wall-mounted or remote speed control. To install and use the accessories, follow the instructions included with each product. For quiet and optimum performance of your Hunter fan, use only Hunter speed controls.

CAUTION: To reduce the risk of personal injury, attach the fan directly to the support structure of the building according to these instructions, and use only the hardware supplied.
To install a ceiling fan, be sure you can do the following:

- Locate the ceiling joist or other suitable support in ceiling.
- Drill holes for and install wood screws.
- Identify and connect electrical wires.
- Lift 40 pounds.

If you need help installing the fan, your Hunter fan dealer can direct you to a licensed installer or electrician.

Gathering the Tools
You will need the following tools for installing the fan:

- Electric drill with 9/64” bit
- Standard screwdriver (magnetic tip recommended)
- Phillips-head screwdriver (magnetic tip recommended)
- Wrench or pliers
- Ladder (height dependent upon installation site)

Checking Your Fan Parts
Carefully unpack your fan to avoid damage to the fan parts. Refer to the included Parts Guide. Check for any shipping damage to the motor or fan blades. If any parts are missing or damaged, contact your Hunter dealer or call Hunter Technical Support Department at 888-830-1326 (In Canada, call 1-866-268-1936).

Installing Multiple Fans?
If you are installing more than one fan, keep the fan blades and blade irons (if applicable) in sets, as they were shipped.
2-1. Drill two pilot holes into the wood support structure through the outermost holes in the outlet box. The pilot holes should be 9/64” in diameter.

2-2. Partially install two canopy screws in the holes on each end of the hanger bracket, as shown in the figure to the right.

2-3. Your fan comes with four mounting isolators. Position the isolators between the hanger bracket and ceiling by inserting the raised areas on each isolator into the holes in the hanger bracket.

2-4. Thread the lead wires from the outlet box down through the hole in the middle of the hanger bracket.

2-5. Align the slotted holes in the hanger bracket with the pilot holes you drilled in the wood support structure.

   **Note:** The isolators should be flush against the ceiling.

2-6. Place a flat washer on each of the two 3” wood screws and pass the screws through the slotted holes in the hanger bracket into the pilot holes you drilled.

   Tighten the screws into the 9/64” pilot holes; do not use lubricants on the screws. Do not over tighten.
3 • Assembling and Hanging the Fan

3-1. Position the square hanger so that the green ground wire attached to the square faces out of the large opening in the metal bracket.

3-2. Holding the wires out of the way, lift the motor assembly and place the square hanger into the opening in the ceiling plate.

⚠️ WARNING: Make sure the square hanger can not rotate in the metal bracket. Failure to do so could result in the fan falling.

3-3. Install two locking screws through the holes in the side of the metal bracket to secure the square hanger.
All wiring must be in accordance with national and local electrical codes and ANSI/NFPA 70. If you are unfamiliar with wiring, use a qualified electrician.

Wall switches are not included. Select an acceptable general-use switch in accordance with national and local electrical codes.

4-1. Before attempting installation, make sure the power is still off.

4-2. To connect the wires, hold the bare metal leads together and place a wire nut over them, then twist clockwise until tight. For all these connections use the wire nuts provided.

4-3. Connect the bare or green ground wire (grounding) from the ceiling to the green ground wire (grounding) from the ceiling plate and the green ground wire (grounding) from the fan.

4-4. Connect the white wire (grounded) from the ceiling to the white wire (grounded) from the fan.

4-5. Connect the remaining wires as follows:

**Dual Switch Wiring:**
- The black wire (ungrounded) from the ceiling to the black wire (ungrounded) from the fan
- The black/white wire (ungrounded) from the fan to the wire (ungrounded) for the wall switch

**Single Switch Wiring:**
- The black wire (ungrounded) from the ceiling to the black (ungrounded) and the black/white wire (ungrounded) from the fan

⚠️ **CAUTION:** Be sure no bare wire or wire strands are visible after making connections.

4-6. Turn the splices upward and push them carefully back through the ceiling plate into the outlet box.

4-7. Spread the wires apart, with the grounded wires on one side of the outlet box and the ungrounded wires on the other side of the outlet box.
5 • Installing the Motor Housing

5-1. Place the fan housing over the motor.

5-2. Align the keyholes in the fan housing with the two partially installed canopy screws in the hanger bracket. Rotate the fan housing to situate the screws in the narrow ends of the keyholes.

5-3. Install the two remaining canopy screws into the holes in the fan housing and into the hanger bracket. Securely tighten all screws.

5-4. Install the rubber plugs into the holes over the canopy screws.
6 • Assembling the Blades

Hunter fans use several styles of fan blade irons (brackets that hold the blade to the fan).

6-1. Install the grommets into the blades by hand.

6-2. Place each blade between a blade iron and medallion. Install three blade screws to attach the medallion to the blade iron. Repeat for all blades.

6-3. For each blade, insert one blade mounting screw through the blade iron, and attach lightly to the fan. Insert the second blade mounting screw, then securely tighten both mounting screws.

**Note:** The blades on this fan have been treated with Hunter’s Dust Armor protection, making the blades less likely to attract dust and dirt. Use a dry or slightly damp lint free cloth to clean the blades. Do not use a furniture polish or any other cleaners that leave any residue, as they will damage the protective Dust Armor on the blades.
Your Hunter fan comes with an integrated light fixture assembly and an optional switch housing cap and plug button. This feature gives you the option of installing the fan with OR without the included light fixture. The steps below direct you whether or not you are installing a light fixture.

**WARNING:** Use only the light fixture supplied with this fan model.

7-1. To attach the upper switch housing, partially install two housing assembly screws into the switch housing mounting plate.

7-2. Feed the upper plug connector through the center opening of the housing.

7-3. Align the keyhole slots in the housing with the housing assembly screws.

7-4. Turn the housing counterclockwise until the housing assembly screws are firmly situated in the narrow end of the keyhole slots. Install the remaining screw into the housing. Tighten all three screws firmly.

**CAUTION:** Make sure the upper switch housing is securely attached to the switch housing mounting plate. Failure to properly attach and tighten all three assembly screws could result in the switch housing and light fixture falling.

7-5. **If you want to install the light fixture**, proceed with step 7-6 now.

**If you do not want to install the light fixture**, you need to uninstall it now. See “Uninstalling the Light Fixture” on step 7-14. Once you have uninstalled the light fixture, continue with step 7-6.

---

**Steps 7-1 – 7-3**
- Housing Assembly Screw
- Upper Switch Housing
7-6. To attach the lower switch housing, connect the upper plug connector from the motor to the lower plug connector in the lower switch housing assembly.

**Note:** Both plug connectors are polarized and will only fit together one way. Make sure the connectors are properly aligned before connecting them. Incorrect connection could cause improper operation and damage to the product.

7-7. Place the lower switch housing assembly over the upper switch housing. Align the side screw holes in the upper and lower switch housings. Attach the lower switch housing to the upper switch housing with three housing assembly screws.
Installing the Glass Bowl

7-8. First install B10 candelabra bulbs (60 Watt Maximum) into the sockets.

7-9. Thread the light and fan pull chains through the hole in the center of the glass bowl. Then, thread the light pull chain through the hole in the center of the cover plate.

7-10. Thread the fan pull chain through the grommet hole in the side of the cover plate.

7-11. Place the cover plate up against the glass bowl. Align the holes in the cover plate and glass bowl.

7-12. Thread the light pull chain through the finial and screw the finial onto the threaded rod end until tight.

7-13. Attach the extra pull chains (included) to the light and fan pull chains using the breakaway connector. (You may find the breakaway connector on the end of the extra chain.)

Note: In compliance with US federal energy regulations, this ceiling fan contains a device that restricts the light kit to a maximum of 190 Watts. Exceeding that limit or the marked limit on this product may result in fire hazard or improper operation.
7 • Completing Your Installation With or Without a Bowl Light Fixture (Continued)

Uninstalling the Light Fixture

7-14. To uninstall the light fixture, first disconnect the plug connectors between the black wire and the black wire with a white stripe.
7-15. Disconnect the plug connectors between the two white wires.
7-16. Remove the two screws attaching the light kit to the lower switch housing.
7-17. Remove the light fixture from the lower switch housing, pulling disconnected wires through the hole in the center of the lower switch housing.

**Note:** When removing the wires, pull the thin plug connector (male) through first, and then pull the other plug connector (female) through the hole.
7-18. Install the dummy terminals (included in the sack parts) on the two disconnected wires in the lower switch housing.
7-19. Install the switch housing cap and plug button to the lower switch housing.
7-20. Once you have uninstalled the light fixture, continue with step 7-6.
In warm weather, use downward air flow pattern

In cold weather, use upward air flow pattern

8-1. Turn on electrical power to the fan.

8-2. The fan pull chain controls power to the fan. The pull chain has four settings in sequence: High, Medium, Low, and Off.
   • Pull the chain slowly to change settings.
   • Release slowly to prevent the chain from recoiling into the blades.
   • The chain uses a breakaway connector that separates if the chain is jerked. If this happens, simply reinsert the chain into the connector.

8-3. The light pull chain controls the power to the light fixture. The chain has two settings: ON and OFF.

8-4. Ceiling fans work best by blowing air downward (counterclockwise blade rotation) in warm weather to cool the room with a direct breeze. In winter, having the fan draw air upward (clockwise blade rotation) will distribute the warmer air trapped at the ceiling around the room without causing a draft.

8-5. The blades on this fan have been treated with Hunter’s Dust Armor protection, making the blades less likely to attract dust and dirt. Use a dry or slightly damp lint free cloth to clean the blades. Do not use a furniture polish or any other cleaners that leave any residue, as they will damage the protective Dust Armor on the blades.

8-6. For cleaning finishes, use a soft brush or lint-free cloth to prevent scratching. A vacuum cleaner brush nozzle can remove heavier dust. Remove surface smudges or accumulated dirt and dust using a mild detergent and a slightly dampened cloth. You may use an artistic agent, but never abrasive cleaning agents as they will damage the finish.

To Change Airflow Direction
Turn the fan off and let it come to a complete stop. Slide the reversing switch on the fan to the opposite position. Restart fan.
9 • Troubleshooting

**Problem: Nothing happens; fan does not move.**
1. Turn power on, replace fuse, or reset breaker.
2. Loosen canopy, check all connections according to the wiring the fan section.
3. Check the plug connection in the switch housing.
4. Push motor reversing switch firmly left or right to ensure that the switch is engaged.
5. Pull the pull chain to ensure it is on.
6. Remove the shipping bumpers.

**Problem: Noisy operation.**
1. Tighten the blade bracket screws until snug.
2. Tighten the blade screws until snug.
3. Check to see if the blade is cracked. If so, replace all the blades.
4. Change to an approved speed control.
5. Be sure that the glass is secure.
6. Check and tighten the screws in the switch housing mounting plate and in the upper and lower switch housing.

**Problem: Excessive wobbling.**
1. If your fan wobbles when operating, use the enclosed balancing kit and instructions to balance the fan.
2. Tighten all blade and/or blade iron screws.
